

Advanced Billing

Bill recurring sales transactions or installment contracts according to user defined parameters. Available parameters include product/item, description, units, unit price, number of payments, payment frequency, start date, renewal date, expiration date and type. Stand alone billing application includes receivables management and reports.

Product Highlights

Recurring Transactions

Set up schedules for recurring sales transactions; enter billing frequency, start and end dates, and billing amounts. Billing frequency options include monthly, semi-monthly, quarterly, semi-annually and annually.

Installment Contracts

Set up schedules for installment contracts; enter number of payments, billing frequency and billing amounts for each contract. Billing frequency options include monthly, semi-monthly, quarterly, semi-annually and annually.

Integration

Import data from other systems via a delimited file or database query.

Benefits

Save time by automating accounting processes; utilize automated routine to create invoices and quick apply payment methods for receipt processing.

Track profitability by Customer and contract; maintain detail billing and payment records for contracts and accounts.

Eliminate manual recordkeeping; maintain all records and related transactions in a single integrated application.

Licensing

Desktop

Single user application with local database.

Network

Multi-user application with central database.
